Molecular Aspects of Hepatocellular Carcinoma

www.ebooks.benthamscience.com/book/9781608050727

About the eBook
A better understanding of the molecular mechanisms involved in the initiation, progression, and metastasis of hepatocellular carcinoma is critical for developing more rational diagnostic and therapeutic approaches. This e-book covers current developments on clinically relevant research on the molecular biology of hepatocellular carcinoma.

Contents
- The Relationship between Liver Fibrosis and Hepatocellular Carcinoma
- A Possible Link between Non-Alcoholic Steatohepatitis and Hepatocellular Cancer
- Viral Associated Hepatocellular Carcinoma
- Non-Viral Cause of Liver Cirrhosis: Do they Lead to Hepatocellular Carcinoma?
- Signaling Pathways Involved in Molecular Carcinogenesis of Hepatocellular Carcinoma
- MicroRNAs in Human Hepatocellular Carcinoma
- Aging and Hepatocellular Carcinoma: Possible Molecular Mechanisms
- Molecular Mechanisms of Liver Cancer Metastasis
