Soluble Factors Mediating Innate Immune Responses to HIV Infection

www.ebooks.benthamscience.com/book/9781608050062

About the eBook

This eBook provides a detailed and high quality description about the role of innate immune responses regulating HIV replication. It covers factors such as suPAR and HMGB1. At present, these two novel factors are the subject of very intense research on HIV infections. A key advantage of this e-book is the selection of authors, recognized worldwide as leading experts in their field.

Contents

- ▶ CD8 Antiviral Soluble Factors and Human Immunodeficiency Virus (HIV) Control
- ▶ Cytokines and HIV Infection
- ▶ Defensins and HIV Infection
- ▶ Extracellular HMGB1: an Ambiguous Messenger During HIV-1 Infection
- ▶ The uPA/uPAR System and suPAR in HIV Infection
- ▶ α 1Antitrypsin Therapy Increases CD4+ Lymphocytes to Normal Values in HIV-1 Patients
- ▶ Vitamin D and HIV Infection
- ▶ The Complement System and HIV-1 Infection
