Angiogenesis & Therapeutic Targets in Cancer

www.ebooks.benthamscience.com/book/9781608050079

About the eBook

Angiogenesis inhibition has been proposed as a general strategy to fight against cancers. This book covers different therapeutic targets for angiogenesis interventions with emphasis on clinical development of antiangiogenic drugs that target antiangiogenic cascade in different forms of cancers like breast cancer, multiple myeloma, renal carcinoma, gastrointestinal, prostate and lung cancer.

Contents

Angiogenesis: Antiangiogenesis Strategy and Angiogenesis Inhibitors
Angiogenesis and Gastrointestinal Cancer
Breast Cancer Prevention and Treatment with Dietary Agents Affecting Angiogenesis: Progress and Promise
Angiogenesis in Cancer: Therapeutic Targets and Angiogenesis Inhibitors
Receptor Tyrosine Kinases in Human Schwannoma
Angiogenesis and Lung Cancer: Antiangiogenic Agents and Therapy
Angiogenesis and Gastric Cancer: Molecular Pathways & Therapeutic Targets
