Frontiers in Drug Design and Discovery, Volume (3)

www.benthamscience.com/ebooks/9781608052011

About the ebook

This Ebook series is devoted to publishing the latest advances contributed by eminent researchers in drug design and discovery

Contents

- ▶ Editorial: Structure-Based Drug Design in the 21st Century
- ▶ Alpha-Helix Mimetics: Progress Toward Effective Modulation of Protein-Protein Complexes
- ▶ Structures of HIV Protease Guide Inhibitor Design to Overcome Drug Resistance
- ▶ Structure and Function of G Protein-Coupled Receptors Studied Using Sequence Analysis, Molecular Modeling and Receptor Engineering
- ▶ Virtual Docking: How Are We Doing And How Can We Improve?
- ▶ Fragment-Based Lead Discovery by NMR
- ▶ Targeting Drug Resistant Mutations Using Novel Binding Interactions - Lessons Learned from Abl-T315I and their Implications in D
- ▶ Recent Advances in the Structure-Guided Design of Protein Kinase Inhibitors
