Frontiers in Medicinal Chemistry, Volume (4)

www.ebooks.benthamscience.com/book/9781608052073

About the eBook

is an eBook series devoted to the review of areas of important topical interest to medicinal chemists and others in allied disciplines including developments in rational drug design, high-throughput screening, compound diversity measurements, drug absorption, drug distribution, metabolism, new and emerging drug targets, pharmacogenomics, chemoinformatics, and structure-activity relationships.

Contents

- Methods for Ligand-Based Virtual Screening
- Simple Coumarins: Privileged Scaffolds in Medicinal Chemistry
- Chromatography and Computational Chemical Analysis for Drug Discovery
- New Therapeutic and Experimental Aspects of Chelators as Antidotes of Metal Toxicity
- Taurine Analogues: A New Class of Therapeutics
- Combinatorial Natural Products: From Cloning to Analysis
- Medicinal Plants for the Prevention and Treatment of Bacterial Infections
