Multicore Hardware-Software Design and Verification Techniques

www.benthamscience.com/ebooks/9781608052257

About the eBook

This e-book attempts to cover the design and verification issues related to different application domains as a singular source of reference to the state-of-the-art techniques in multicore processor design and software programming that covers multiple application domains.

Contents

- Acknowledgements
- Affinity and Distance-Aware Thread Scheduling and Migration in Reconfigurable Many-Core Architectures
- On the Design of Multicore Architectures Guided by a Miss Table at Level-1 and Level-2 Caches to Improve Predictability and Performance/Power Ratio
- TRoCMP: An Approach to Energy Saving for Multi-Core Systems
- Model-Driven Multi-core Embedded Software Design
- Automatic High-Level Code Generation for Multi-Core Processors in Embedded Systems
- Index

Methicillin Resistant Staphylococcus aureus (MRSA)
