The Inflammatory Milieu of Tumors Cytokines and Chemokines that Affect Tumor Growth and Metastasis

About the eBook

The eBook is a timely overview of the roles played by inflammatory soluble mediators in neoplastic diseases. The topics addressed in this volume serve as a handy reference to investigators studying basic aspects of the malignant tumor growth, to clinicians who wish to better understand the processes involved in malignancy, and to pharmacological professionals seeking novel candidates for therapeutic intervention in cancer.

Contents

- Tumor-Infiltrating Inflammatory Cells as Possible Therapeutic Targets
- TNF and Cancer: Friends and/or Foes?
- IL-1 is a Major Cytokine that Controls the Balance between Inflammation and Immunity in the Tumor Microenvironment
- ELR+ CXC Chemokines and their Role in Malignancy
- The CXCR3/CXCR3 Ligand Axis: Friend or Foe?
- The Inflammatory CC Chemokines CCL2 and CCL5 in Malignancy: Leukocyte Migration and Beyond
- Homeostatic Chemokines
