Advances in Mathematical Chemistry and Applications (Volume 2)

www.ebooks.benthamscience.com/book/9781681080529

About the eBook

Advances in Mathematical Chemistry and Applications highlights the emerging discipline of discrete mathematical chemistry. The second volume includes chapters on mathematical structural descriptors of molecules and biomolecules, topological representation of molecular structure, connectivity matrices, use of weighted 2D Fingerprints in similarity-based virtual screening and much more.

" **...a text that should be on the shelf of every scientist working quantitatively at the molecular level and will excite the creativity in many readers...** "
Foreward by Lemont B. Kier,
Virginia Commonwealth University, USA

Contents

- Topological Efficiency Approach to Fullerene Stability - Case Study with C_{50}
- Similarity in Chemical Reaction Networks: Categories, Concepts and Closures
- Discrimination of Small Molecules Using Topological Molecular Descriptors
- The Periodicity of Molecules
- The GRANCH Techniques for Analysis of DNA, RNA and Protein Sequences
- Marine Algal Toxicity Models with Dunaliella tertiolecta: In Vivo and In Silico
- Anti-Tubercular Drug Designing Using Structural Descriptors
