Frontiers in Clinical Drug Research – Anti Allergy Agents (Volume -2)

About the eBook

This is an exciting eBook series comprising a selection of updated review articles relevant to the recent development of pharmacological agents used for the treatment of allergies. The scope of the reviews includes clinical trials of anti-inflammatory and anti-allergic drugs, drug delivery strategies used to treat specific allergies (such as inflammation, asthma and dermatological allergies), lifestyle dependent modes of therapies and the immunological or metabolic mechanisms that are of interest to researchers as targets for new drugs.

Contents

- Inflammatory Mediators and Neuromodulators: Targeting in Asthma and Chronic Obstructive Pulmonary Disease
- Allergic Asthma Pathogenesis and Antioxidant Therapy
- Antioxidants as a Therapeutic Option in Inflammatory Liver Diseases with a Metabolic Origin
- Medical Treatment of Allergic Rhinitis
- Nothing to be Sneezed at: Th2 Cytokines as Novel Therapeutic Targets for the Production of Anti-Allergy Agents
- Peripheral and Central Inflammation Caused by Neurogenic and Immune Systems and Anti-Inflammatory Drugs
- Anti-Allergy Agents, from Past to Future
