“Frontiers in Medicinal Chemistry” covers all the areas of medicinal chemistry, including developments in rational drug design, bioorganic chemistry, high-throughput screening, combinatorial chemistry, compound diversity measurements, drug absorption, drug distribution, metabolism, new and emerging drug targets, natural products, pharmacogenomics, chemoinformatics, and structure-activity relationships. This eBook series is essential for any medicinal chemist who wishes to be kept informed and up-to-date with the latest and the most important advances.

Contents

- ADME Optimization and Toxicity Assessment in Drug Discovery
- The Oxidative Stress Menace to Coronary Vasculature: Any Place for Antioxidants?
- Atherosclerosis, Mitochondrial Dysfunction and Oxidative Stress: Mitochondria-Targeted Antioxidants as Potential Therapy
- Endothelial Dysfunction in Diabetes: An Update on Mechanisms and Therapeutic Targets
- Pyridinium Oximes as Cholinesterase Reactivators. An Update of the Structure-Activity Relationship and Efficacy in the Treatment of Poisoning with Organophosphorus Compounds
- Calixarenes in Biotechnology and Bio-Medical Research
