Frontiers in Clinical Drug Research - Hematology: Volume 2

About the eBook

This eBook series brings updated reviews to readers interested in learning about research in medicinal chemistry, pharmacology, molecular biology and biochemistry of natural and synthetic drugs employed in the treatment of anemias, coagulopathies, vascular diseases and hematological malignancies.

Contents

- Molecular and Therapeutic Clues in Chronic Myeloid Leukemia
- Bispecific and Multivalent Antibodies - New Swords to Combat Hematological Malignancies
- Natural Killer Cells as an Immune Cell Therapy Option for Bone Marrow Transplantation in Hematological Malignancies: Implications for New Therapies Based on Lipid Transfer and Cell-to-Cell Communication
- Nanoparticles in Health and Disease: An Overview of Nanomaterial Hazard, Benefit and Impact on Public Health Policy - Current State and Outlook
- Monoclonal Antibodies in Lymphoma
