Overall Aspects of Non-Traditional Glasses: Synthesis, Properties and Applications

www.ebooks.benthamscience.com/book/9781681082073/

About the eBook

This monograph guides readers through the science of glass. It starts by giving a general summary of glass properties and progresses to explain different glass types that have had a wide scientific and commercial impact in our lives. The glass types covered in this text include bioglass, fluoride glass, glass ceramics, photonic glass, solar glass and chalcogenide glass.

Contents

- General Features about Glasses
- Glasses as Biomaterials
- Glass-Ceramics: Concepts and Practical Aspects
- Heavy Metal Fluoride Glasses
- Chalcogenide Glasses
- Photonic Bandgap Glass-Based Structures
- Glass in Solar Energy
