About the eBook

Basic Biology and Clinical Aspects of Inflammation provides information about the critical cells and biochemical mediators involved in the complex process of inflammation. Readers are introduced to the basic scientific background on the subject, after which the book progresses towards translational research in clinical settings. Topics covered in this volume include the modulation of inflammation during normal and chronic wound healing, altered metabolism during inflammation processes, the effect of ageing on inflammatory processes, as well as details about the underlying molecular processes behind specific clinical pathologies that are driven by excessive inflammation in the body (allergic reactions, type 2 diabetes, cardiac and vascular disease, arthritis, periodontal disease, inflammatory bowel disease and neuroinflammation). The volume also provides the latest information on pharmacotherapy for inflammation and interesting contributions towards the mathematical modeling and network analysis of inflammation. Basic Biology and Clinical Aspects of Inflammation features contributions from a distinguished group of international researchers and clinicians highly recognized for their specific expertise in the field of inflammation. The information presented in this reference is useful to academics, medical professionals, health care regulators and pharmaceutical scientists.

Contents

- Introduction to Basic Biology and Clinical Aspects of Inflammation
- Cell Mediators of Acute Inflammation
- Biochemical Mediators of Inflammation and Resolution
- Wound Healing and Dermatologic Aspects of Inflammation
- Metabolic Regulation of Inflammation
- Aging and Inflammation
- Allergic Inflammation
- Inflammation in Type 2 Diabetes
- The Vascular Tree and Heart with Relationship to Inflammation
- Rheumatoid and Degenerative Arthritis-Associated Inflammation
- Inflammation in Oral Diseases
- Intestinal Inflammation and Inflammatory Bowel Disease
- Neuroinflammation
- Pharmacotherapy for Inflammatory Processes
- Mathematical Modeling of Inflammation
- Network Analysis of Inflammation
