Frontiers in Clinical Drug Research - Anti-Cancer Agents (Volume - 3)

www.ebooks.benthamscience.com/book/9781681082899/

About the eBook

The third volume of the eBook series begins with a detailed review of the molecular biology of inhibitors that target EGF-family receptors. This review is divided into two parts that covers extracellular and intracellular molecules. Other reviews cover targeted therapies for cancers such as melanoma, follicular lymphoma and topics such as cancer immunotherapy, apoptosis targeting and the Warburg Effect.

Contents

- Tumor Resistance Mechanisms to Inhibitors Targeting the Epidermal Growth Factor Receptor– Part I: Extracellular Molecules
- Tumor Resistance Mechanisms to Inhibitors Targeting the Epidermal Growth Factor Receptor – Part II: Intracellular Molecules
- Chemotherapeutic, Immunologic, and Molecularly Targeted Therapy for the Treatment of Advanced Melanoma
- Targeting the Warburg Effect for Cancer Therapy: A Long and Winding Road
- Immunotherapy Strategies in Follicular Lymphoma: Antibodies, Vaccines and Cells
- Epigenetics and Cancer Cell Metabolism: Crosstalk and Therapeutic Opportunities
- Apoptosis Targeting Therapeutics in Clinical Trials
